Where Sets Meet (Venn Diagrams)
By Peter Winkler

**News**

13 The Science of Better Science
Researchers are exploring networked computational analysis, formal classification, and topic modeling to better identify relevant scientists, ideas, and trends.
By Gregory Goft

16 The War Against Botnets
Increasingly sophisticated botnets have emerged during the last several years. However, security researchers, businesses, and governments are attacking botnets from a number of different angles—and sometimes winning.
By Samuel Greengard

19 The Social Life of Robots
Researchers are trying to build robots capable of working together with minimal human supervision. But will they ever learn to get along?
By Alex Wright

23 ACM Fellows Inducted
Forty-six men and women are recognized as 2011 ACM Fellows.

24 Economic and Business Dimensions
Incentive Auctions
Reallocating valuable wireless spectrum can generate billions of dollars in revenue to the U.S. federal government while also benefiting consumers.
By Gregory Rosston

27 Education
Peer Instruction: A Teaching Method to Foster Deep Understanding
How the computing education community can learn from physics education.
By Beth Simon and Quintin Cutts

30 Inside Risks
Yet Another Technology Cusp: Confusion, Vendor Wars, and Opportunities
Considering the unexpected risks associated with seemingly minor technological changes.
By Donald A. Norman

33 Kode Vicious
Wanton Acts of Dehugging
Keep your debug messages clear, useful, and not annoying.
By George V. Neville-Neil

35 Privacy and Security
Emotion and Security
Examining the role of human emotional response in making complex security-related decisions.
By Rose McDermott
